

Create a Program to Upload Files and Handle Various Web Elements.

Description:

Creating a Java project that uploads files and handles various web elements.

Algorithm:

Step 1: Create a Java Project.

Step 2: Add the jar files of the Selenium Standalone Server.

Step 3: Create a page object design pattern class to store the web elements of a webpage.

Step 4: Create a class to handle web elements.

Step 5: Create a class to handle external elements.

Step 6: Create a table in SQL – for product data.

Step 7: Create a DB connection class to initiate a JDBC connection.

Step 8: Create a class for Screenshot.

Step 9: Run the project.
